

N-of-You

May 17, 2016

The State Of Affairs

- Integrating Patient-generated data from **outside the clinic** is really happening
- More people are **using apps and buying devices** to improve their health

But...a patient's health data is **STILL** trapped in silos

Data's not only siloed. It's different.

- In format
 - HL7 and CCDA feeds for EHRs
 - flat files are used by researchers for Stata and R
 - public APIs producing custom XML, JSON
 - differences in naming, time formats, etc.
- In meaning
 - differences in units, time zone handling, etc.
 - differences in granularity, grouping
 - missing information

Open mHealth

Open mHealth is a non-profit startup making it easier to **access** and **use** mobile health data.

How Do We Do It?

1. Open Standard

The first and only open standard for mobile health data

-100 different clinically-valid schemas

- Schemas are the **common language** needed to interoperate data between apps and devices and make it useful in a clinical environment
- These schemas represent clinical measurements

```

Study Protocol

Regimen A: ☒ Tylenol (acetaminophen)

- ☐ Any NSAID (e.g., ibuprofen, naproxen, sulindac)
- ☐ Codeine combination product (e.g., Tylenol with codeine, Tylenol #3)
- ☐ Tramadol (e.g., Ultram, Ryzolt, ConZip, Rybix)
- ☐ Hydrocodone combination product (e.g., Vicodin, Norco)
- ☐ Oxycodone combination treatment (e.g., Percocet)
- ☐ Complementary treatment: including but not limited to physical activity (exercise, stretching, yoga), mindfulness (meditation, relaxation, music therapy)

Regimen B: ☐ No specific treatment to be tested against Regimen A

- ☐ Tylenol (acetaminophen)
- ☒ Any NSAID (e.g., ibuprofen, naproxen, sulindac)
- ☐ Codeine combination product (e.g., Tylenol with codeine, Tylenol #3)
- ☐ Tramadol (e.g., Ultram, Ryzolt, ConZip, Rybix)
- ☐ Hydrocodone combination product (e.g., Vicodin, Norco)
- ☐ Oxycodone combination treatment (e.g., Percocet)
- ☐ Complementary treatment: including but not limited to physical activity (exercise, stretching, yoga), mindfulness (meditation, relaxation, music therapy)

Do you intend to prescribe or continue any pain treatments in addition to the ones selected above?

☐ Yes ☒ No

Study Start Date:

Period Length:

Number of Cycles: → Your study will end on Mon Nov 24 2014.

Do you intend to prescribe or continue any pain treatments in addition to the ones selected above?

☐ Yes ☒ NoStudy Start Date: Period Length: Number of Cycles:  → Your study will end on Mon Nov 24 2014.

ADVISORY

You have selected an **opioid** or **tramadol** as part of your patient's treatment regimen. As a reminder, good clinical practice is to increase opioids *gradually* over the first few days. Decreases in both opioids and tramadol should also be done gradually over a few days to prevent withdrawal symptoms. Because of this, most n-of-1 trials involving opioids or tramadol should use **2-week treatment periods** (not 1-week periods). Patients should be advised that if they become drowsy, they should stop the medication and seek your advice.

Do you intend to prescribe or continue any pain treatments in addition to the ones selected above?

☐ Yes ☒ No

Study Start Date: 

Period Length:

Number of Cycles: → Your study will end on Mon Nov 24 2014.

Mandatory Outcomes

These are outcomes that will be tracked by every participant in the study.

- A daily questionnaire about pain intensity and interference.
- A daily question about how much fatigue you felt in the past day.
- A daily question about how drowsy you felt during the current day.
- A daily question about problems moving your bowels.
- A daily question about the previous night's sleep.

Pain medicines can sometimes affect our thinking or concentration. Please select one of the following questions about your thinking or concentration to track every day.

✓ My thinking has been foggy ...
I have had to work harder than usual to keep track of what I was doing ...

Optional Neuropathic Pain Outcome

Does the patient have pain accompanied by burning, pins and needles, itching, or a sensitive or unpleasant sensation on the skin?

☒ Yes ☐ No

→ Your patient will receive daily questions about neuropathic pain.

Create and Assign Protocol

Do you intend to prescribe or continue any pain treatments in addition to the ones selected above?

Trialist

A platform for running n-of-1 trials

We need your help.

Open mHealth

A background image showing a close-up of a person in a white lab coat. A stethoscope is visible around their neck. They are holding a silver clipboard with their left hand and a white pen with their right hand, appearing to be writing on a piece of paper. The image is semi-transparent, allowing the text to be overlaid.

Prototyping around two protocols

1. Atrial Fibrillation
2. Citizen Science

Looking for researchers to...

1. Pilot and test
2. Willing to make anonymized results publicly available

If you'd like to help us pilot
Trialist, email me today.
Thanks.
